YOUR DRIVER QUICK START

Open the roadbook link on your phone. No account or app installation is needed. Chapters scroll vertically and the map controls sit below the map.

Tap here to open the roadbook or scan the QR code.

1 CHOOSE YOUR LEG

Open **The route**. Choose **Morning (96.1 mi)** or **Afternoon (102.9 mi)**. The map, checkpoints, mileage, and GPX download update together.

2 EXPLORE THE MAP

Tap **Trace route** for a manual preview that pauses at each checkpoint. Tap **Continue route** to move on, or **Restart** to begin again. Tap a numbered pin or checkpoint name for details. Drag the mileage slider to explore any part of the leg.

3 UNDERSTAND NAVIGATION

The roadbook has **no live GPS tracking or spoken directions**. **Open location in Maps** opens one stop; Google may choose different roads. **Save route GPX** downloads the selected leg for a compatible app. Import it and check the route before driving.

4 IF YOU WANT GOOGLE MY MAPS

On a computer, sign in to Google My Maps, create a map, add a layer, choose **Import**, then select the GPX. This is a custom map for visual reference. Do not assume it creates Google Maps turn-by-turn navigation along the event route.

5 BEFORE YOU LOSE SIGNAL

Bookmark the link and open it before departure. The **How to use** chapter includes an offline HTML download. Save it while connected, open it in a browser, and test it first; some phones restrict local HTML files. External Maps and website links still require internet.

TODAY'S ROAD CHECK

Share the roadbook link with your test drivers. Check both legs, phone readability, stop locations, and suitable photo or regroup areas. Ask a passenger to operate the book while moving, or stop safely. Event times, the exact photo turnout, and the shorter alternate remain to be confirmed.
